809

user presses liey on keyboard (while PDA is still in sleep mode)

keyboard controller in keyboard receives key press signal, stores key code of key pressed, and sends "hot sync" signal to PDA (note: keyboard controller samples keystrokes even in low power mode by drawing power from PDA)

PDA, in response to hot sync signal, texits low power mode (back to normal power mode) and receives the signal

keyboard's software driver intercepts
hot sync signal and panses activity
on PDA; keyboard's software driver
then listene for keyboard's
identifier code (transmitted from
keyboard after keyboard sends
Not syne signal)
